Mars®

Flexed and stiff at first sight, Mars resembles a sturdy interpretation of select vernacular signs from North America. However, its designer blended much more diverse flavors — conjuring the rocky beaches of Seattle, the harbor of Marseille, and the dusty ground of the Red Planet.

Mars comes in a pack of three pills, no more. The dynamic trio consists of a pumped-up extended style and slimmer condensed, with a standard cut in the middle. The three cuts are designed to be worked together, yet they maintain their own singularity as a stand-alone typeface in a wide variety of design projects.

The modern Olympic Games or Olympics (French: Jeux olympiques) are leading international sporting events featuring summer and winter sports competitions in which thousands of athletes from around the world participate in a variety of competitions. The Olympic Games are considered the world's foremost sports competition with more than 200 nations participating. The Olympic Games are held every four years, with the Summer and Winter Games alternating by occurring every four years but two years apart. Their creation was inspired by the ancient Olympic Games, which were held in Olympia, Greece, from the 8th century BC to the 4th century AD. Baron Pierre de Coubertin founded the International Olympic Committee (IOC) in 1894, leading to the first modern Games in Athens in 1896. The IOC is the governing body of the Olympic Movement, with the Olympic Charter defining its structure and authority. The evolution of the Olympic Movement during the 20th and 21st centuries has resulted in several changes to the Olympic Games. Some of these adjustments include the creation of the Winter Olympic Games for ice and winter sports, the Paralympic Games for athletes with a disability, and the Youth Olympic Games for teenage athletes. The Deaflympics and Special Olympics are also endorsed by the IOC. The IOC has had to adapt to a variety of economic, political, and technological advancements. The advent of the state-sponsored “full-time amateur athlete” of the Eastern Bloc countries further eroded the ideology of the pure amateur, as it put the self-financ

Bodybuilding is the use of progressive resistance exercise to control and develop one’s musculature. An individual who engages in this activity is referred to as a bodybuilder. In professional bodybuilding, bodybuilders appear in lineups and perform specified poses (and later individual posing routines) for a panel of judges who rank the competitors based on criteria such as symmetry, muscularity, and conditioning. Bodybuilders prepare for competitions through a combination of intentional dehydration, elimination of nonessential body fat, and carbohydrate loading to achieve maximum vascularity, as well as tanning to accentuate muscular definition. Bodybuilders may use anabolic steroids to build muscles. The winner of the annual IFBB Mr. Olympia contest is generally recognized as the world’s top male professional bodybuilder. The title is currently held by Phil Heath, who has won every year from 2011 to 2017. The winner of the Women’s Physique portion of the competition is widely regarded as the world’s top female professional bodybuilder. The title is currently held by Juliana Malacarne, who has won every year since 2014. Since 1950, the NABBA Universe Championships have been considered the top, amateur-bodybuilding contests, with notable winners such as Reg Park, Lee Priest, Steve Reeves, and Arnold Schwarzenegger. Stone-lifting traditions were practiced in ancient Egypt, Greece and Tamilakam. Western weightlifting developed in Europe from 1880 to 1953, with strongmen displaying feats of strength for the public and challenging each other. The focus was not on their physique, and they often had large bellies and fatty limbs. Bodybuilding developed in the late 19th century, promoted in England by German Eugen Sandow, now called the “Father of Bodybuilding”. He allowed audiences to enjoy viewing h...

Western weightlifting developed in Europe from 1880 to 1953, with strongmen displaying feats of strength for the public and challenging each other. The focus was not on their physique, and they often had large bellies and fatty limbs. Bodybuilding developed in the late 19th century, promoted in England by German Eugen Sandow, now called the “Father of Bodybuilding”. He allowed audiences to enjoy viewing his physique in “muscle display performances”. Although audiences were thrilled to see a well-developed physique, the men simply displayed their bodies as part of strength demonstration.
